Laravel create function
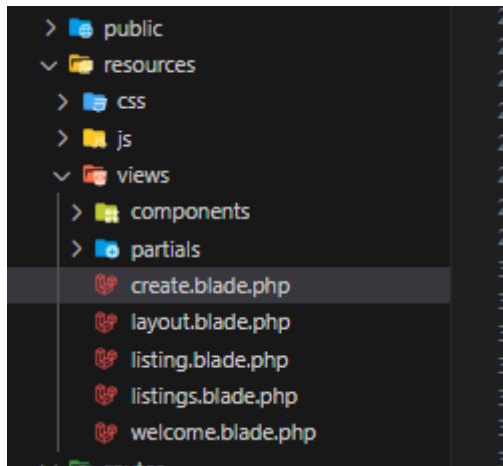

Step 1: In the
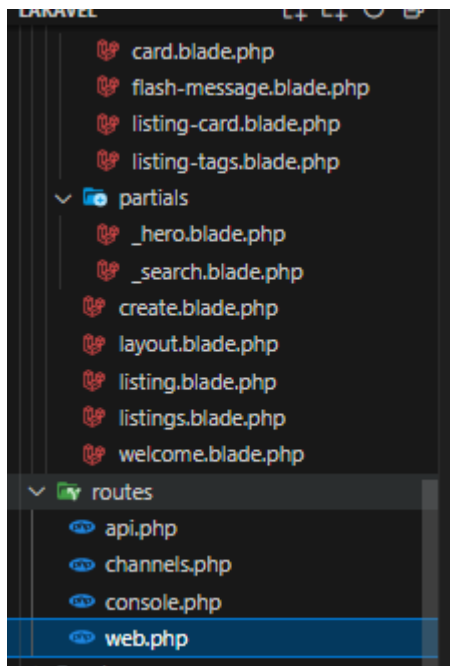

Add the following code:

Route::get('/listings/create',[ListingController::class,'create']);

It will go to the ListingController and find the class public function name as create

ListingController page:

```
26
27        public function create(){
28            return view("create");
29        }
30
```

The interface location are located at here

```
> public
> resources
  > css
  > js
  > views
    > components
    > partials
      create.blade.php
      layout.blade.php
      listing.blade.php
      listings.blade.php
      welcome.blade.php
> router
```

This is the form of design:

CREATE A GIG
Post a gig to find a developer

Company Name

Job Title

Example: Senior Laravel Developer

Job Location

Example

Copyright © 2022, All Rights reserved   Post Job

Step 2:

Add a public function call store to submit the form data to database

```php
public function store(Request $request){
    // dd($request->all());
    $formFields=$request->validate([
        'title'=>'required',
        'company'=>['required',Rule::unique('listings',"company")],
        'location'=>'required',
        'website'=>'required',
        'email'=>['required','email'],
        'tag'=>'required',
        'description'=>'required'
    ]);

    listings::create($formFields);
    return redirect("/")->with('message','Listing created successfully');

}
```

This code is locate at listingController

Step 3: go to the listings modal and add this code:
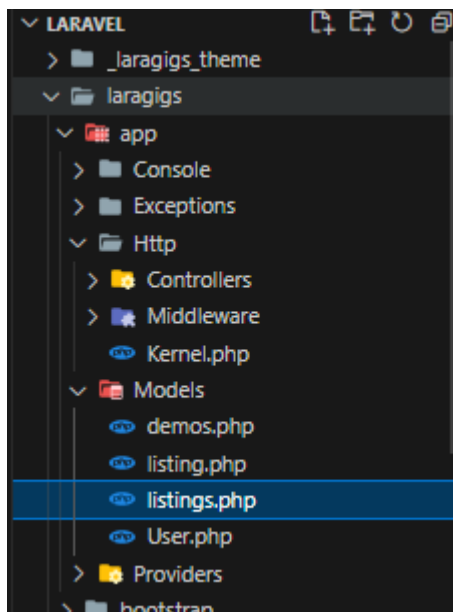

Add the following code:

```php
agigs > app > Models >  listings.php >  listings >  scopefilter
1   <?php
2
3   namespace App\Models;
4
5   use Illuminate\Database\Eloquent\Factories\HasFactory;
6   use Illuminate\Database\Eloquent\Model;
7
8   class listings extends Model
9   {
10      use HasFactory;
11
12      protected $fillable=['title','company','location','website','email','description','tag'];
13
14      public function scopefilter($query,array $fillter){
15          if($fillter["tag"] ?? false){
16              $query->where('tag','like','%'.request('tag').'%');
17          }
18
19          if($fillter["search"] ?? false){
20              $query->where('title','like','%'.request('search').'%')
21              ->orwhere('description','like','%'.request('search').'%')
22              ->orwhere('tag','like','%'.request('search').'%');
23          }
24      }
25
26
27  }
28
```

This coding is to open the lock of the form

The final step to to the create.blade.php add @csrf to generate token key for the form

```html
13          </header>
14
15          <form action="/listings" method="POST">
16              @csrf
17              <div class="mb-6">
```

You can add below at <form> below

Then the create function can be run
